

Classic Poker

This game is a three deal poker program with traditional poker rules, controlled by a random generator.

Playing the game

The BET button sets the actual value of the game. When this value changes, the rewards in the reward table also change, according to the actual bet. The START button begins the first game. Five new cards dealt and above the middle the 1st DEAL label appears. Simultaneously the actual bet is deducted from the credit and the following labels appearing in the information field: HOLD CARDS – SELECT BET – PUSH START The program recognises the possible winning combinations and automatically holds the cards. With the five HOLD buttons the good cards can be kept or the program selected ones deleted for the second deal. Pressing again the START the not held cards exchanged. Above the middle card the 2nd DEAL label displayed and a new bet value is deducted from the credit. If there is no winning combination from the actual deal, then this game is ended. If there is a winning combination in the second deal, the player can ask a new deal with the START button and in the price of a new bet to achieve a higher reward in the third round. For example in the second round there is a “3 OF A KIND” reward, then only one appropriate card is missing for a “POKER” prize. The BET button accepts the rewards in the first and second round, after this the player can decide to double or credit it. After the third deal it is not necessary to accept, in this case only the doubling or the crediting is possible.

Bonus of 4

This bonus is represented by a magical number in the “BONUS 4 of” field, the default value is 5. To achieve this bonus reward a winning combination of a poker from 5 is necessary. In this bonus poker, the player wins the fivefold of the normal poker prize. After this reward the magical number in the “BONUS 4 of” field changes to six and now this bonus triggered by a 6 poker winning combination. The reward is sixfold of the poker prize. If this is won, then the magical number changes to 7, 8, 9 and 10 in the “BONUS 4 of” field. In that case if the 10 bonus is won, the bonus reward is tenfold of the poker prize and the magical number returns to five and the game continues in this order.

Bonus of 3

The value of this bonus reward is in the last row of the reward table. It is calculated as follows: 3 x magic number x BET. Next to right there are ten square fields with numbers and red arrows. The “BONUS of 3” is winnable during the “3 of a kind” rewards with the magical number. After every this kind of bonus the highest number is replaced by a red arrow. When all number to 1 is substituted by an arrow, then the bonus reward is multiplied by the magical number. Following this raise of the reward, all of the red arrows are removed and in the square field the numbers from ten to one appear again, in a descending order. This bonus is directly depending from the magical number in the “BONUS 3 of” field, if the value of this number is ten, then the raised collected reward of BONUS 3 is 3 x 10 x 10 x BET.

Doubling

During the doubling the cards are divided into two groups, according to the following: LOW – HOLD2 A, 2, 3, 4, 5, 6 HIGH – HOLD4 8, 9, 10, J, Q, K The player can risk the achieved reward in double or nothing basis by guessing that the next draw card belongs to which group. The decision is helped by displaying the previous five cards. If the guess was correct, the group is hit, the reward is doubled, in the opposite case it is lost. The 7 card is not belonging to any group, so if it is the next card, the reward is unchanged, and the player can continue with the doubling. Of course the player can ask to credit the achieved prize and finish the process by pressing the START button at any time.

Bets and reward multipliers

The lowest and highest limit of the selectable bet is adjustable by the operator.

High pair	Bet × 2
Two pair	Bet × 3
Three of a kind	Bet × 5
Straight	Bet × 7
Flush	Bet × 9
