

Fruit Bonus

A game with two deals, on five reels with selectable 1 – 4 rows. The valuation happens with the calculation of the similar symbols on the active row. The Joker symbol replaces any symbol. There can be only one Joker per row.

Game play

We can set the value of the bet with the BET button. The HOLD5 button sets the number of the winning rows. The price of the game – the bet on one line multiplied by the number of the active lines – is deducted from the CREDIT after pressing the START button. The first deal is always on the lowest row. The given winning combinations or those which can be a winning combination are automatically held by the program, but the player can modify them. The held symbols copied into the other playing rows. If there is no held, then the next deal will be the first deal. In the second deal new symbols will be dealt into the not held places in the first row, and into the empty spaces the above rows. The valuation happens by rows, the base of the prize is the bet on one row. The first deal can be accepted by the player (with the BET button), it is not mandatory to have a second deal. The bonus rewards are valid by rows. The reward is transferable to the doubling game.

Cherry bonus

If after the second deal the player wins two cherries, then the given row's Cherry Meter level is raised and if it is full the Cherry Bonus is won.

Fruit bonus

If after the deal there is a 4 or 5 rewards from the Plum, Cherry, Melon or Bell symbols then it activates the light in the Fruit Bonus field. If every light is lit the player wins the 50 times of the line bet.

Bets and reward multipliers

The lowest and highest limit of the selectable bet is adjustable by the operator. To see the Paytable press the HOLD4 button or on dual screens it is displayed on the second monitor.
