

## Random Bonus

The game is a program with three reels and three winning lines, in which the computer simulation of the traditional engine powered reels realised.

## Playing the game

We can set the value of the bet with the BET button. The value of the bet is deducted from the CREDIT after pressing the START button, the lower three reels starts to rotate and within a short time they will stop one by one. If there was a winning combination, then it's copied into the upper and middle reels. If there was no winning combination for the first spin, the program holds the probable combination, but the player can alter the held reels with the HOLD buttons. The held reels appear on the upper and middle reels and pressing the START again and the deduction of a new bet, the not held reels will rotate new symbols. In that case if there was a reward, then its value appears in the WIN field and it can go to the CREDIT with the START button or with the BET button to the doubling game.

## Bonus reward

When the START button is pressed in the bonus windows all of the three fields filled randomly a value between 10 and 50, these are multiplier values. If on the reels three BELL symbols appear, then it is a bonus reward. The reels and the bonus fields are linked together according to the A, B, and C letters. So if the three BELLS occur on the middle reel, which is marked with B, then the bonus window's B field will give the reward. Of course the three BELLS can occur on all reels; in this case the "A" counter is linked to the lower reel, the "B" to the middle and "C" to the upper. The sum of these rewards goes to the WIN and it can go to the CREDIT with the START button or with the BET button for doubling.

## Bets and reward multipliers

The lowest and highest limit of the selectable bet is adjustable by the operator. To see the Paytable press the HOLD4 button or on dual screens it is displayed on the second monitor. The base of the prize is sum of all bets – the price of one spin.
